FOR RELEASE AT ASIS 2007

INTELLIKEY Introduces New Product Line Powered by BlueWave Security

Las Vegas – September 23, 2007 - INTELLIKEY Corporation, a leader in electronic access control systems, announces *Freedom*, the latest result of its partnership with BlueWave Security. Utilizing BlueWave's proprietary low-power Wi-Fi technology, *Freedom* delivers online access to INTELLIKEY's line of standalone door controllers. The system is battery-powered, and mounts completely on the door, with no additional wiring required.

Freedom uses a site's existing Wi-Fi infrastructure to enable re-programming of doors, reading of audit information, and enabling and disabling of keys from a central location. A site can easily add online capability to existing INTELLIKEY controlled doors, to provide a complete access control solution at a fraction of the cost of other vendors' products.

"This is a great opportunity to enhance the INTELLIKEY product line by combining our expertise in physical security and access control with proven communications technology to offer our customers superior capabilities at a price that wouldn't have been possible just a few years ago," said INTELLIKEY General Manager Singh Chhatwal. "We're very excited about this partnership."

"BlueWave is unique in the physical security industry in its focus on the use of open-standards Wi-Fi networks for physical access control. Our team of world-class Wi-Fi engineers not only helped invent Wi-Fi networking for Symbol Technologies (now Motorola) in the mid 1980s, we are now happy to introduce an industry first: an ultra-low power Wi-Fi modem that is customized for integration with stand-alone locksets. We are delighted to be partnered with INTELLIKEY to introduce this new technology. The combination of the INTELLIKEY lockset and the BlueLink™ Wi-Fi modem delivers the lock."

The *Freedom* system will be available through INTELLIKEY dealers beginning in the first quarter of 2008, and a demonstration of the product can be viewed at the INTELLIKEY booth (#1183) at ASIS in Las Vegas, September 24th – 27th.

About INTELLIKEY Corporation

Since 1988, INTELLIKEY has been in the business of designing and selling technology that combines the best features of mechanical locking hardware with electronic access control to provide security for a wide variety of applications. The INTELLIKEY system protects students, passengers, employees and customers at universities, airports and government facilities around the world.
